

Manage Compute Infrastructure—Without Lifting a Finger

Data center management is critical to IT performance. Unfortunately, the more time your team spends patching servers and provisioning machines within your data center, the *less time* they're devoting to core technology initiatives.

With Data Center services from ConRes, you can offload your routine maintenance tasks or design and execute your entire service plan. Let our experts proactively manage your data center infrastructure so your team can drive your IT strategy.

ConRes Managed Services drive IT performance with:

- Predictable costs
- Proactive support
- Adaptive service
- Customer-centric processes

OUR DATA CENTER SERVICES INCLUDE

- 24x7x365 proactive monitoring
- Management and administration of compute infrastructure
- Modification of server roles and features
- Operating system provisioning
- Ongoing patching
- First-call support triage with appropriate original equipment manufacturer (OEM)
- Monthly availability and capacity reporting

HOW WE DELIVER

- Staffed 24x7x365
- 100% U.S.-based resources
- Centralized management platforms
- Automated-system monitoring
- Customized runbooks
- Vendor management and coordination
- Integration with existing business processes and procedures
- ITIL approach to IT service management
